

Spherical plain bearings GE..GWM-NIRO-2RSF with media-resistant sliding layer FLUROGLIDE®-MEDIA SOLID

Spherical plain bearing series G
DIN ISO 12240-1, mating surface, hard chrome/
FLUROGLIDE®-MEDIA SOLID, maintenance-free

Larger tilting angle due to wider inner ring

Individual dimensions available on request.

The bearings are fitted with a newly developed slide layer **FLUROGLIDE®-MEDIA SOLID**, which does not lose its properties even in interaction with oil, grease etc. For spherical plain bearings up to the size 50, the hardened bearing shell is blasted on one side. From size 60, the spherical plain bearing comprises two half-shells, which are secured with a screw clamp.

Materials

Outer ring: Stainless steel 1.4031 (Aisi 420), hardened
 Inner ring: Stainless steel 1.4031 (Aisi 420), hardened, ground, polished,
 hard-chromed on the sliding surface
 Sealing: HPU

The permissible operating temperature is -30° C to + 130° C.

Spherical plain bearing with new sliding coating FLUROGLIDE®-MEDIA SOLID

The new generation of bearings is particularly well suited for application areas in oily environments. The properties of the spherical plain bearings are not impaired by the effects of grease and oil either.

Running tests have shown that the expected life of 5 million cycles has been considerably exceeded. Both test series, whether dry running or lubricated with grease, achieved a life of over 6 million cycles. The friction properties are in similar ranges for both test series as well.

Working life
