

FLURO®-Gelenklager GmbH

Rotation Master

FOR USE AT
HIGH SPEEDS
BALL-BEARING ROD ENDS

Rev up: These ball-bearing rod ends can take it.

Rod ends series K with female thread and integrated self-aligning ball-bearing for use at high speeds.

Rod ends series K (DIN ISO 12240-4) with self-aligning ball-bearing
Series GIB..

Individual dimensions available on request.

Materials

Housing: Heat-treated steel, hardened, galvanised, running surface superfinished

Ball: Bearing steel, hardened, ground

Rolling element: Bearing steel, hardened, ground, polished

Cover plate: Stainless steel

Grease nipple: Up to size 10 grease nipple to DIN 3405 D1/A
 From size 12 grease nipple to DIN 71412 H1

Maintenance: Regreasable, initially greased with aluminium-complex-soap-grease (-45° C to +120° C)

NEW
FROM OUR OWN PRODUCTION

Rod ends series K with male thread and integrated self-aligning ball-bearing for use at high speeds.

**Rod ends series K (DIN ISO 12240-4)
with self-aligning ball-bearing
Series GAB..**

They feel comfortable with high speeds: Our Rotation Masters.

Significantly longer service lifetime proven

Service lifetime tests have shown that our ball bearings have a significantly longer service lifetime than comparable competitive products. Even through the increase of the permissible dynamic load capacity and the permissible speed of up to 20 %, a longer service lifetime could be achieved (see diagram).

Due to a special surface finishing, which prevents hydrogen embrittlement, our Rotation Masters are also suitable for aviation applications.

* Base value of the permissible dynamic load capacity and permissible speed from competing product

** Increase of the permissible dynamic load capacity and the permissible speed of competing product of 10 %

*** Increase of the permissible dynamic load capacity and the permissible speed of competing product of 20 %

Service lifetime tested on a test bench proves

- ✓ **Equivalent** to competition
- ✓ **Higher** dynamic load ratings and **higher** speeds
- ✓ **Significantly longer** service lifetime than comparable competitive products
- ✓ **Less** material wear, **longer** maintenance intervals
- ✓ **Consistently** smooth running until end of service life

Welcome
to the solutions area.
